

# Scanning tickets with the TicketCo app

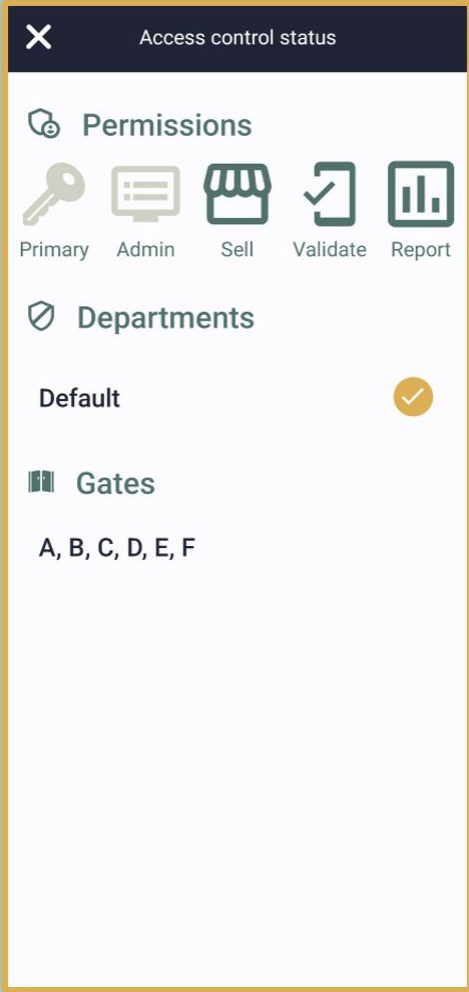

## Scanning tickets with the TicketCo admin app

TicketCo

### Preparation before you start scanning

- Download the TicketCo Admin app from the App Store or Google Play
- Ensure your device has the latest version of the app and native operating system
- Use the credentials provided by your account admin - if you are unsure what these are, ensure to check with the admin on the account
- Refer to the **Last sync** button at the bottom of the main menu to ensure that the database has been updated recently
  - We always recommend tapping this button before you start scanning
  - You can also use the **Erase & Synchronize database** button under **Settings**

## Scanning tickets with the TicketCo admin app

### Preparation before you start scanning

- Ensure you know which **Gates** and/or **Departments** you will be scanning tickets for
  - Ask your account admin or manager if you are unsure
- When you have logged in with your credentials, select the correct department
  - NB! You will only be able to check in tickets pertaining to that specific department
- You will also see a summary of the permissions and gates which are activated on your user
- You can always access this screen and switch departments by tapping your username in the main menu

## How to scan and check in tickets

- Select **Validate** in the main menu
- You may need to grant permission for the app to use your device's camera
- You can then use the device to scan QR codes on any paper, digital or plastic tickets presented to you
- Hold your device about an arm's length away from the ticket when scanning
- Ensure you have sufficient lighting when scanning, and remember to use the torch button at the top if you need extra light
- You can also refresh the database manually from this page by tapping the arrows at the top of the screen

### How to scan and check in tickets

- If you cannot scan a QR code, use the **Enter verification code** box at the bottom of the screen to input the customer's five or six letter reference code
- As a last resort, select **Manual** to manually search the customer's name, email or phone number and find their tickets for the event
  - We suggest that such situations be escalated to the account admin or manager in order to avoid queues at the gate

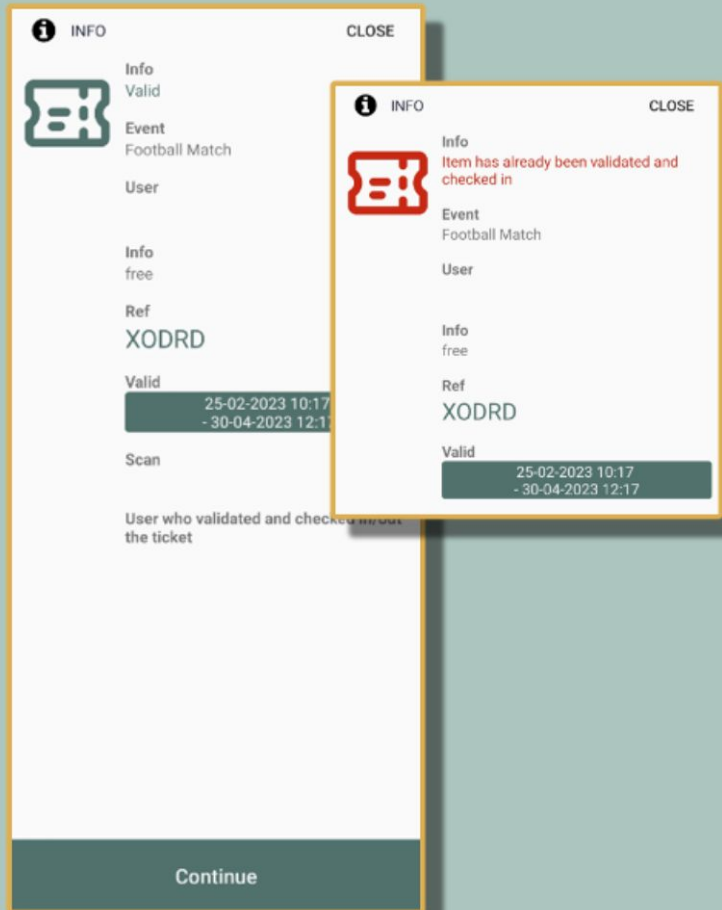

# Scanning tickets with the TicketCo admin app

## Scan results

- Once you have scanned a ticket, you will see clearly whether the ticket was valid or not: valid ticket will display in a green/blue colour, and invalid tickets display in red

## Scanning settings

- Under **Settings** in the main menu, you can choose between **Approve scan results** and **Continuous scanning**
- The former will ask you to confirm each ticket by hitting **Continue**, and the latter will automatically check in valid tickets without the need for an extra tap
- We always suggest starting with **Approve scan results** if you are new to the app, and you can later switch to **Continuous** for faster scanning

# Scanning tickets with the TicketCo admin app

## Group tickets

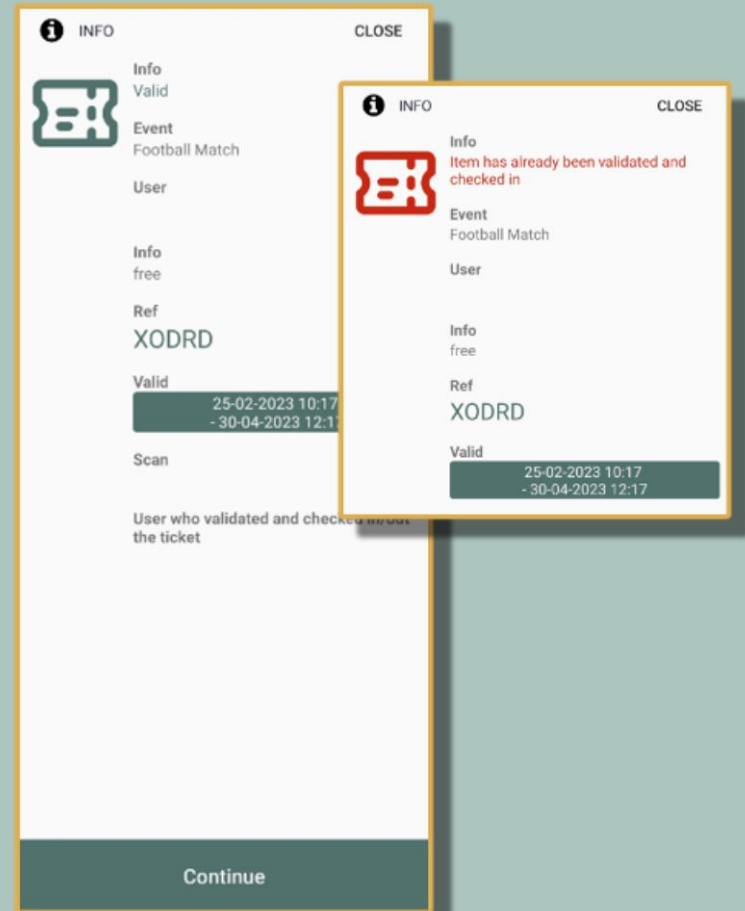

If you are presented with a group ticket, note you will need to select the number of tickets within the order before continuing.

## Season tickets and subscriptions

If there are a couple of events/matches within close proximity to each other, you may be asked to select which event the season pass or subscription should be checked in on.

## Invalid tickets

Tickets may come up as invalid if they have already been checked in, if they are refunded, if they belong to a different department, or if they belong to a different organiser or different event. Ensure that you have a process in place for managing or escalating any invalid tickets.

# Thank you
